Our Biometric Future Kelly A. Gates 2011-01-23 Since the 1960s, a significant effort has been underway to program computers to “see” the human face—to develop automated systems for identifying faces and distinguishing them from one another—commonly known as Facial Recognition Technology. While computer scientists are developing FRT in order to design more intelligent and interactive machines, businesses and states agencies view the technology as uniquely suited for “smart” surveillance—systems that automate the labor of monitoring in order to increase their efficacy and spread their reach. Tracking this technological pursuit, Our Biometric Future identifies FRT as a prime example of the failed technocratic approach to governance, where new technologies are pursued as shortsighted solutions to complex social problems. Culling news stories, press releases, policy statements, PR kits and other materials, Kelly Gates provides evidence that, instead of providing more security for more people, the pursuit of FRT is being driven by the priorities of corporations, law enforcement and state security agencies, all convinced of the technology’s necessity and unhindered by its complicated and potentially destructive social consequences. By focusing on the politics of developing and deploying these technologies, Our Biometric Future argues not for the inevitability of a particular technological future, but for its profound contingency and contestability.

The Herbalist's Bible Julie Bruton-Seal 2014-09-02 A lost classic of Western herbalism—rediscovered and restored with 200 full-color images. Herbalist to King Charles I, John Parkinson (1567–1650) was a master apothecary, herbalist, and gardener. Famous in his own lifetime for his influential books, his magnum opus, the *Theatrum Botanicum*, was published in 1640 and ran to 1,766 large pages. The sheer scope and size was perhaps to prove the book’s downfall, because while it was much

revered—and plagiarized—it was never reprinted and, centuries later, has attained the status of an extremely rare and valuable book. Parkinson was writing at a time when Western herbalism was at its zenith, and his skills as a gardener (from his grounds in Covent Garden) combined perfectly with his passion for science, observation, and historical scholarship. In *The Herbalist's Bible*, Julie Bruton-Seal and Matthew Seal have beautifully combined selections from Parkinson's book with their own modern commentary on how each plant is used today to create a truly one-of-a-kind, comprehensive collection of herbal information old and new. Parkinson's clear and lively description of a chosen plant's "vertues" or healing properties side-by-side with the editors' notes—including copious herbal recipes—make this the perfect book for students and practitioners of herbalism, historians, and gardeners, all of whom will welcome this restoration of Parkinson's lost classic.

Long Island Airports Joshua Stoff 2004-09-01 Long Island is a natural airfield. The central area of Long Island's Nassau County—known as the Hempstead Plains—is the only natural prairie east of the Allegheny Mountains. The island itself is ideally placed at the eastern edge of the United States, adjacent to its most populous city. In fact, nowhere else in America has so much aviation activity been confined to such a relatively small geographic area. The many record-setting and historic flights and the aviation companies that were developed here have helped place Long Island on the aviation map. Through one hundred years of aviation history, Long Island has been home to eighty airfields. From military airfields to seaplane bases and commercial airports, the island has had more airports than any other place of similar geographic proportion in America. Most have vanished without a trace, but a handful remains. Long Island Airports is the first book to document the pictorial history of these airports and airfields.

Marginalised Communities in Higher Education Neil Harrison 2021 "Drawing on examples from nine countries across five continents, this book offers anyone interested in the future of higher education the opportunity to understand how communities become marginalised and how this impacts on their access to learning and their ability to thrive as students. Focusing on groups that suffer directly through discriminatory practices or indirectly through distinct forms of sociocultural disadvantage, this book brings to light communities about which little has been written and where research efforts are in their relative infancy. Each chapter documents the experiences of a group and provides insights that have a wider reach and gives voice to those that are often unheard. The book concludes with a new conceptualisation of the social forces that lead to marginalisation in higher education. This cutting-edge book is a must read for higher education researchers, policy makers, and students interested in access to education, sociology of education, development studies, and cultural studies"--
