One Thousand Ways to Make \$1000 F. C. Minaker 2017-07-11 First published in 1936, One Thousand Ways to Make \$1000 is the long out-of-print book that Warren Buffett's biographers credit with shaping the legendary investor's business acumen and giving him his trademark appreciation of compound interest. After pulling a copy of One Thousand Ways off a library shelf at age eleven and devouring F.C. Minaker's plucky and practical business advice, Buffett declared that he would be a millionaire by the time he was 35. Written in the immediate, conversational style of Dale Carnegie's How to Win Friends and Influence People, this book is full of inventive ideas on how to make money through excellent salesmanship, hard work, and resourcefulness. While some of the ideas may seem quaint today-goat dairying, manufacturing motor-driven chairs, and renting out billiard tables to local establishments are among the money-making ideas presented- the underlying fundamentals of business explained in these pages remain as solid as they were over seventy years ago. Covering a wide spectrum of topics including investing, marketing, merchandising, sales, customer relations, and raising money for charity, One Thousand Ways to Make \$1000 is both a durable, classic business book and a fascinating portrait of determined entrepreneurship in Depression-era America. Every effort has been made to reproduce the content exactly as it was originally presented.

The Home of the Blizzard Being the Story of the Australasian Antarctic Expedition, 1911-1914Douglas Mawson 2010-01-08 Mawson turned down an invitation to join Robert Falcon Scott's Terra Nova Expedition in 1910; Australian geologist Griffith Taylor went instead. Dawson chose to lead his own expedition, the Australian Antarctic Expedition, to King George V Land and Adelie Land, the sector of the Antarctic continent immediately south of Australia, which at the time was almost entirely unexplored. The objectives were to carry out geographical exploration and scientific studies, including visiting the South Magnetic Pole.

Architects' Data Ernst Neufert 1991-01-15 This is an essential aid in the initial design and planning of a project. The relevant building type is located by a comprehensive index and cross reference system, a condensed commentary covers user requirements, planning criteria, basic dimensions and other considerations of function, siting aspect etc. A system of references based on an extensive bibliography supports the text. In every section plans, sections, site layouts, design details and graphs illustrated key aspects of a building type's design. Most illustrations are dimensioned or scaled - the metric system of measurement is used throughout, and the equivalent in feet/inches can easily be read either off a graphic scale on the page or from the built-in conversion table. The illustrations are international in origin and include both well know and less famous designers. Architects Data is primarily a handbook of building types rather than of construction techniques and details. However its treatment of components (such as doors and windows) and of spaces for building services is extremely thorough, since consideration of this data is an essential element of the planning process. The opening pages of basic data on man and his buildings cover critical subjects such as scale, drawing practice, noise, light and space for the same reason. Particular attention has also been paid to the implications of energy conservation, means of escape from fire and the needs of the elderly and the disabled.

Maker of Patterns: An Autobiography Through Letters Freeman Dyson 2018-04-10 A lifetime of candid reflections from physicist Freeman Dyson, "an acute observer of personality and human foibles" (New York Times Book Review). Written between 1940 and the late 1970s, the postwar recollections of renowned physicist Freeman Dyson have been celebrated as an historic portrait of modern science and its greatest players, including Robert Oppenheimer, Richard Feynman, Stephen Hawking, and Hans Bethe.

Chronicling the stories of those who were engaged in solving some of the most challenging quandaries of twentieth-century physics, Dyson lends acute insight and profound observations to a life's work spent chasing what Einstein called those "deep mysteries that Nature intends to keep for herself." Whether reflecting on the drama of World War II, the moral dilemmas of nuclear development, the challenges of the space program, or the demands of raising six children, Dyson's annotated letters reveal the voice of one "more creative than almost anyone else of his generation" (Kip Thorne). An illuminating work in these trying times, *Maker of Patterns* is an eyewitness account of the scientific discoveries that define our modern age.

*American Lathe Builders, 1810-1910* Kenneth L. Cope 2001 Once again, Ken Cope has produced a major new reference work that broadens our range of understanding of the history of technological innovation. This is the first book to identify American lathe builders operating throughout the 19th and early 20th centuries. Written in the style of the author's previous groundbreaking books on the machine tool industry, this encyclopedic volume provides the collector, user, and researcher with invaluable information

on over 330 lathe builders, many of whom have previously gone unrecognized by researchers. More than a thousand illustrations, taken from original catalogs and periodicals, trace the development of the American metal cutting lathe from the crude, handbuilt models of the early 19th century to the fast, powerful models introduced in the early 20th century for use with high speed steel cutting tools. Dozens of early lathe accessories, such as gear-cutting attachments, are also identified and illustrated for the first time. In addition, the book contains a glossary of terms used in describing the various lathes
