Virus Taxonomy Andrew M.Q. King 2011 The practical need to partition the world of viruses into distinguishable,
universally agreed upon entities is the ultimate justification for developing a virus classification system. Since 1971, the
International Committee on Taxonomy of Viruses (ICTV) operating on behalf of the world community of virologists has
taken on the task of developing a single, universal taxonomic scheme for all viruses infecting animals (vertebrate,
invertebrates, and protozoa), plants (higher plants and algae), fungi, bacteria, and archaea. The current report builds on
the accumulated taxonomic construction of the eight previous reports dating back to 1971 and records the proceedings of
the Committee since publication of the last report in 2005. Representing the work of more than 500 virologists worldwide,
this report is the authoritative reference for virus organization, distinction, and structure.

Motorcycle Electrical Systems Tracy Martin A motorcycle's electrical system can be daunting to even the most adept home mechanic. And yet, the more complex these systems become—and the more important to a motorcycle's function—the more useful, even critical, it will be to know something about them. That's where this book comes in with a user-friendly guide to understanding, diagnosing, and fixing the electrical systems and components that make a bike run . . . or falter. Veteran technician Tracy Martin explains the principles behind motorcycle electrical systems and how they work. He details the various tools, such as multimeters and test lights, that can be used to evaluate and troubleshoot any vehicle's electrical problem. And in several hands-on projects, he takes readers on a guided tour of their vehicle's electrical system, along the way giving clear, step-by-step instructions for diagnosing specific problems.
