High-Performance Apparel John McLoughlin 2017-09-18 High-Performance Apparel: Materials, Development, and Applications covers the materials and techniques used in creating high-performance apparel, the technical aspects of developing high-performance garments, and an array of applications for high-performance clothing and wearable technology. Part One covers fabric construction for high-performance garments, from fiber types and spinning methods, to weaving, knitting, finishing, and joining techniques. Development of high-performance apparel is covered in Part Two, with particular emphasis on design and product development for function and wearer comfort. Part Three covers a range of applications and wearable technology that make use of high-performance apparel, including chapters on sportswear, protective clothing, and medical, military, and intelligent textiles. The book provides an excellent resource for all those engaged in garment development and production, and for academics engaged in research into apparel technology and textile science. Offers a range of perspectives on high-performance apparel from an international team of authors with diverse expertise Provides systematic and comprehensive coverage of the topic from fabric construction, through apparel design and development, to the range of current and potential applications Presents an excellent resource for all those engaged in garment development and production, and for academics engaged in research

Handbook of Food Products Manufacturing Nirmal Sinha 2007-04-23 The Handbook of Food Products Manufacturing is a definitive master reference, providing an overview of food manufacturing in general, and then covering the processing and manufacturing of more than 100 of the most common food products. With editors and contributors from 24 countries in North America, Europe, and Asia, this guide provides international

expertise and a truly global perspective on food manufacturing.

Evaluation of Novel Approaches to Software Engineering Ernesto Damiani 2018-06-30

This book constitutes the thoroughly refereed proceedings of the 12th International Conference on Evaluation of Novel Approaches to Software Engineering, ENASE 2017, held in Porto, Portugal, in April 2017. The 12 full papers presented were carefully reviewed and selected from 102 submissions. The mission of ENASE is to be a prime international forum to discuss and publish research findings and IT industry experiences with relation to the evaluation of novel approaches to software engineering. The conference acknowledges necessary changes in systems and

software thinking due to contemporary shifts of computing paradigm to e-services, cloud computing, mobile connectivity, business processes, and societal participation.

Manual of Biological Markers of Disease W.J. van Venrooij 2012-12-06 Section A: Methods of Autoantibody Detection This Section provides well structured protocols for autoantibody detection. Step-by-step procedures are accompanied by explanatory notes and comments, clear diagrams, line illustrations and excellent photo illustrations. Extensive literature references lead the way to further background information. The methods presented were validated by more than 40 leading laboratories active in sera analysis, which indicates that these methods have been found to be practically useful and lead to consistent inter-laboratory results: consensus in autoantibody detection.

Section B: Autoantigens This Section contains the first compilation of full, detailed information on autoantigens related to important autoimmune diseases. The chapters are all structured according to an easy-reference fixed template structure: specific detection methods, cellular localization, biochemical characteristics, function, cDNA and derived amino acid sequence, gene structure, B- and T-cell epitopes and lists of published monoclonal antibodies. The text is greatly enhanced by many beautiful schematic figures and photo illustrations. As in Section A, extensive literature references are provided. The information for this section was brought together by leading experts in their fields. This Manual is an ideal text and reference book for bench scientists working in the field of autoimmunity, but also for rheumatologists, general (internal medicine) physicians or clinical immunologists caring for patients with autoimmune disorders.

Techniques in Protein Modification Roger L. Lundblad 1994-11-17 This exciting laboratory support book encompasses the encyclopedic coverage of the most frequently used methods for the site-specific chemical modification of proteins. In a concise manner, it presents methods for the characterization of modified proteins, including: amino acid analysis protein sequence analysis chemical cleavage of protein chains chromatographic separation of peptides It also discusses various approaches to the determination of solution protein concentration. It includes a complete literature survey of the various reagents, a list of the most commonly used reagents with their physical and chemical properties, and a list of preferred reagent suppliers.

Handbook of Automated Scoring Duanli Yan 2020-02-26 "Automated scoring engines [...] require a careful balancing of the contributions of technology, NLP, psychometrics, artificial intelligence, and the learning sciences. The present handbook is evidence that the theories, methodologies, and underlying technology that surround automated scoring have reached maturity, and that there is a growing acceptance of these technologies among experts and the public." From the Foreword by Alina von Davier, ACTNext Senior Vice President Handbook of Automated Scoring: Theory into Practice provides a scientifically grounded overview of the key research efforts required to move

automated scoring systems into operational practice. It examines the field of automated scoring from the viewpoint of related scientific fields serving as its foundation, the latest developments of computational methodologies utilized in automated scoring, and several large-scale real-world applications of automated scoring for complex learning and assessment systems. The book is organized into three parts that cover (1) theoretical foundations, (2) operational methodologies, and (3) practical illustrations, each with a commentary. In addition, the handbook includes an introduction and synthesis chapter as well as a cross-chapter glossary.

Handbook of Techniques for Aquatic Sediments Sampling Alena Mudroch 1994-08-10  
This up-to-date revision of a bestseller sets the standard for planning and implementing cost-effective sediment sampling programs. Handbook of Techniques for Aquatic Sediments Sampling, Second Edition is the only comprehensive text on procedures for sampling bottom sediments, suspended sediments, and sediment pore water. Practical guidance is also provided for sample handling and preservation to ensure accurate physicochemical analysis. No other reference source provides more tools for obtaining representative samples for evaluating potential contaminant effects on aquatic environments.

Chemical Reagents for Protein Modification Roger L. Lundblad 2020-03-11 First published in 1991, Chemical Reagents for Protein Modification, 2nd Edition provides a unique combination of theoretical and practical considerations for the use of chemical reagents for site-specific modification of proteins. The book is divided into three sections, with the first section describing general techniques, including information on the organic chemistry of the various modification reactions; the separation and characterization of site-specific modified proteins, including applications to proteins separated by electrophoresis followed by blotting; the specific chemical cleavage of

peptide bonds in proteins; the separation of peptides by high-performance liquid chromatography and electrophoresis; and the use of chemical reagents to assess conformational change in proteins. The second section provides an encyclopedic description of reagents and reactions for the site-specific modification of individual amino acid residues in proteins. The final section presents descriptions of the use of chemical reagents to label biologically significant sites in proteins, including enzyme active sites and the use of covalent cross-linking to measure protein-protein interactions. Particular emphasis is placed on the use of photoaffinity reagents. The book will be an extremely useful research tool for all investigators interested in the solution chemistry of proteins.
